Kallikreins are serum proteins that are found at high concentrations in human blood. Kallikrein 4 (KLK4, also known as PRSS3) is a member of the serine protease superfamily. KLK4 is reported to have a tumor-suppressive role in prostate cancer, but the expression and prognostic value of KLK4 in non-small cell lung cancer (NSCLC) remain unknown.

Therefore, we performed immunohistochemistry to detect KLK4 expression in NSCLC and performed univariate and multivariate survival analyses using clinicopathological factors in patients with early-stage disease. KLK4 was expressed in the nucleus and cytoplasm in NSCLC cell lines. KLK4 expression was significantly associated with lymph node metastasis ( $p = 0.019$ ) and tumor differentiation ( $p = 0.020$ ), but not with overall survival or disease-free survival in NSCLC. expression was an independent prognostic factor for overall survival (hazard ratio = 2.873, p = 0.022) and disease-free survival (hazard ratio = 2.942, p = 0.025) after adjusting for other clinical factors. These findings suggest that KLK4 may be a prognostic factor for patients with early-stage NSCLC. Clinical experience with Jyotish Astrology: Part 1 In his book, The Astrological Jyotish or Jyotisha, Yagyakkar explains why it is that though it is not absolutely impossible to foretell an event, we need to keep in mind that it will be inaccurate. He says that the knowledge gained from astrology is a reflection of the “purity and strength of the original stock of impressions in the mind of the person seeking to predict, and the wisdom of the astrologer or his experience in interpreting these impressions. The quality of these two is highly contingent on each other. So, we are bound to deal with inaccuracy here.” The history of Vedic astrology has a tradition of highly accurate prediction of events over thousands of years. Many of the principles that we know as traditional astrological principles were not known to ancient astrologers, but were discovered 82157476af
